What is FPL?

Pick 14 Players

Score based on real
player's performance

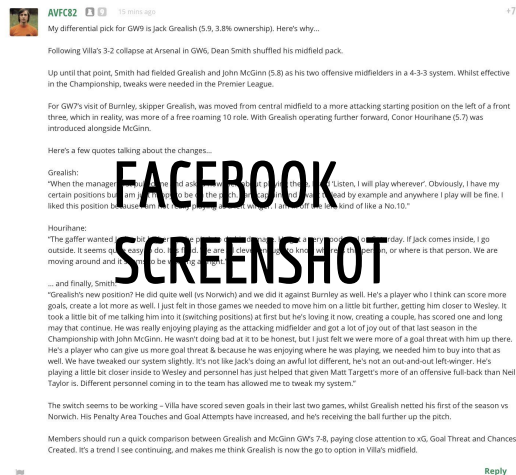

Project Overview

Code applies an OCR to images and returns a text string

```
#Converts image to text string
def ocr_core(filename):
    #Try/except handles 404 and other similar errors
    try:
        response = requests.get(filename)
        img = Image.open(BytesIO(response.content))
        text = pytesseract.image_to_string(img)
        return text
    except:
        return np.nan
```

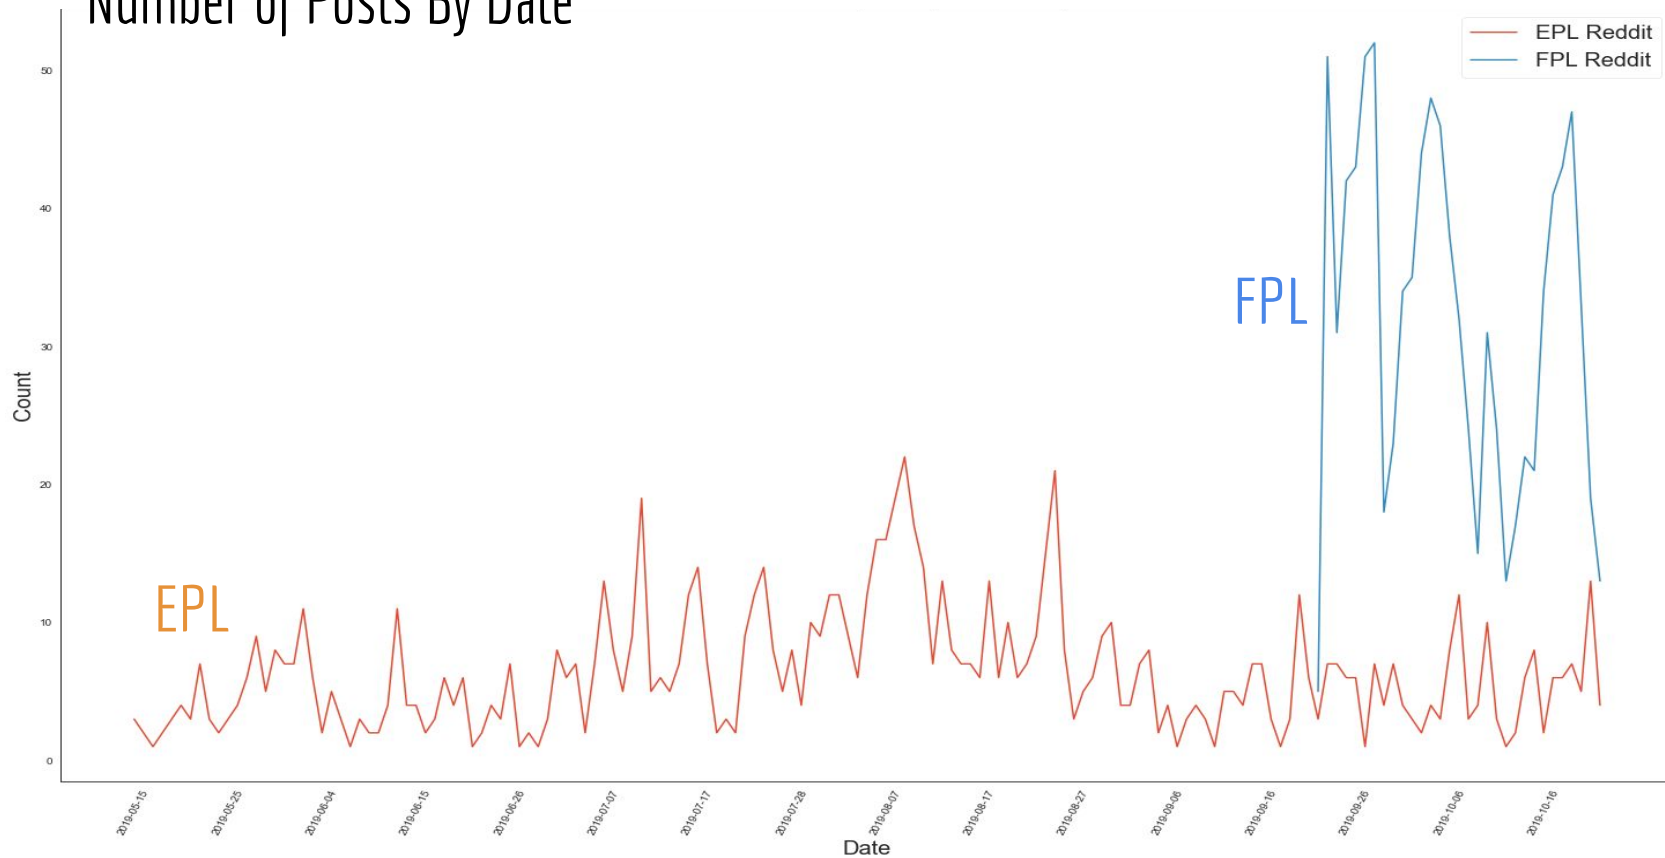

Regex extracts text from embedded tweet in reddit scrape

Modelling Strategy

Four models selected; each model then run on 4 datasets for a total of 16 results.

These models were selected because they facilitate feature analysis

Modelling Results (Accuracy and AUC scores)

Accuracy

	title	selftext	comments	combined
Naive Bayes	0.834171	0.782245	0.869347	0.917923
Log Reg	0.740369	0.793970	0.857621	0.926298
SVM Linear	0.844221	0.783920	0.855946	0.926298
Decision Tree	0.800670	0.738693	0.743719	0.825796

AUC Score

	title	selftext	comments	combined
Naive Bayes	0.919	0.868	0.925	0.971
Log Reg	0.818	0.856	0.910	0.975
SVM Linear	0.928	0.815	0.907	0.976
Decision Tree	0.804	0.750	0.750	0.816

- LogReg and SVM were best performers
- Title alone is a decent classifier
- Self text alone performed poorly; similar content is shared
- The more features you put in, the better the accuracy

What players do r/FPL and r/EPL support?

Coefficients were passed through a dictionary of players + teams to see which players/teams were popular.

- r/FPL focuses on players
- r/EPL focuses on teams and managers (*managers highlighted in green*)

coef	feature
-0.692644	watford

1.191003	manchester
1.260671	arsenal
1.361363	tottenham

What teams do r/FPL and r/EPL support?

r/EPL discusses the big teams (e.g. Manchester United, Arsenal, Manchester City, Liverpool...)

r/FPL discusses the less popular teams (e.g. Watford, Leicester, Burnley...)

There may be opportunities to target fans of the smaller teams as their players are hot topics in FPL circles.

Conclusions

r/FPL is interested in players; r/EPL is interested in teams

Marketing campaign on r/EPL should be team focused

r/FPL is full of FPL jargon

How do we ease EPL redditors into FPL?

Most popular teams/players

Use the Big 6 football clubs, but also appeal to the supporters of the smaller clubs, particularly if their players are doing well in FPL
